# Study of the **analyzing powers** in **deuteron-proton elastic scattering** at Nuclotron

Supervisor: V. P. Ladygin

1

**Introduction**  
*(SRC, DSS project)*

2

**Experimental part**  
*(Accelerators complex & ITS)*

3

**Results**  
*(Polarization, events selection, TMP,  $A_y, A_{yy}, A_{xx}$ )*

# Introduction

The **main activity** in the spin studies at the Laboratory of High Energy Physics of the Joint Institute for Nuclear Research (LHEP-JINR) is related to the **short range correlations (SRCs)** in nuclei.

## SRCs:

- ✓ A typical scale in nuclei is the internucleon distance -  $r_0 \approx 1.7$  fermi;
- ✓ At  $r \geq r_0$  the nuclear processes can be approximately presented as sums of processes on single nucleons;
- ✓ Due to the quantum fluctuations 2 or more nucleons may overlap at smaller distances creating SRC.

The purpose of the **DSS** experimental program is to obtain the information about **2NF** and **3NF** from two processes:

- ✓ **dp-elastic scattering** at the energies between **300 - 2000 MeV**;
- ✓ **dp-breakup** with registration of two protons at deuteron energies of **300 - 500 MeV**

measurement of

- **cross-section**,
- vector  **$A_y$**  analyzing power
- tensor  **$A_{yy}$**  &  **$A_{xx}$**  analyzing powers

The **experimental runs** during 2016/2017yy:

- The energy range: **400 – 1800 MeV**;
- The angular range: **60° - 135° in c.m.s.**;

# Nuclotron-M accelerator complex

# Experiments at Internal Target Station at Nuclotron

**Internal Target Station** is very well suited for the measurements of the **deuteron**- induced reactions observables **at large scattering Angles**

**ITS** consist of

- ✓ Spherical chamber;
- ✓ Target sweeping system.

# Experiments at Internal Target Station at Nuclotron

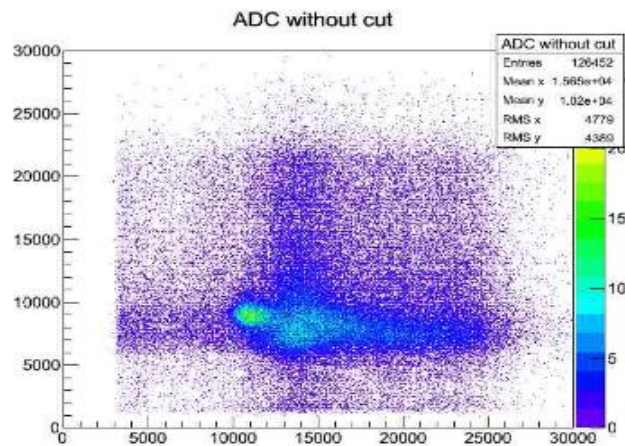

- Deuterons and protons in coincidences using **scintillation counters** ;
- Internal beam and thin **CH<sub>2</sub>** target (**C** for background estimation) ;
- Polarization measurement at **270 MeV**;
- Analyzing powers measurement at **800 MeV**;
- The data were taken for **three spin modes** of PIS: unpolarized, "2-6" and "3-5" ( $p_z, p_{zz}$ ) = (0,0), (-1/3,1) and (-1/3,-1)

# The dp-elastic scattering events selection

Selection of the dp elastic events by the **time difference** between the signal appearance from **deuteron and proton detectors** with the **criteria** on the **amplitude signal correlation**.

The **correlation of the energy-loss** signal for a pair of the deuteron and proton detector **at 95° in c.m.s.** The **solid line** is a graphical **cut** for the dp-elastic events candidate selection.

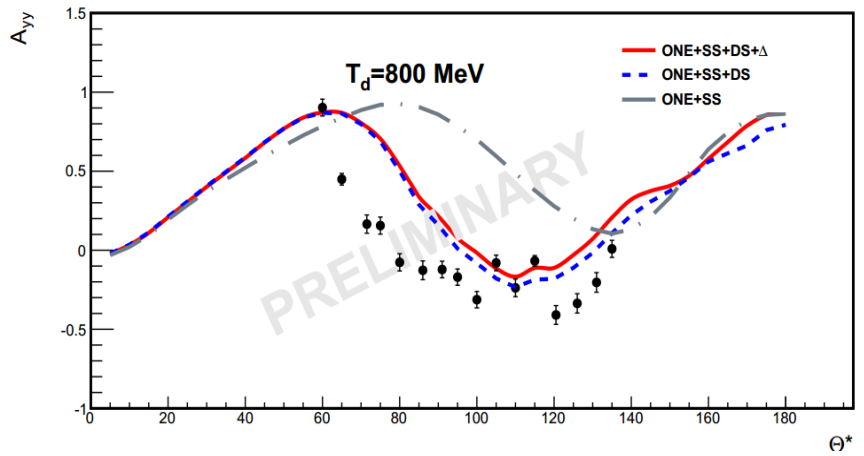

# Interaction point of the beam

**Interaction point** of the **beam** with the **target**. The **solid line** is a graphical **cut** for the selection of dp-elastic scattering events.

# Angular dependences of the $A_y$ , $A_{yy}$ , $A_{xx}$ in dp-elastic scattering

- ✓ Full symbols are the **data** obtained at **Nuclotron**;
- ✓ Lines are the **relativistic multiple scattering model** calculations

Motivation

Experimental part

Results

# Conclusions

- The **data** on the **deuteron analyzing powers**  $A_y$ ,  $A_{yy}$  and  $A_{xx}$  at the **energy of 800MeV** covered the angular region of  $65\text{--}135^\circ$  **in the center-of-mass system** were obtained **at the Internal Target Station at Nuclotron**;
- 
- The obtained data are **compared** with different **theoretical predictions**. The calculation reproduced the obtained data **quite good**.

Thank for your attention

$$\begin{aligned}
 U &= 1 + \frac{1}{2} P_{zz} A_{xx} & P_{zz} &= \frac{2U - 2}{A_{xx}} \\
 D &= 1 + \frac{1}{2} P_{zz} A_{xx} & P_{zz} &= \frac{2D - 2}{A_{xx}}
 \end{aligned}
 \rightarrow$$

$$\begin{aligned}
 L &= 1 + \frac{3}{2} P_z A_y + \frac{1}{2} P_{zz} A_{yy} & P_z &= \frac{L - R}{3A_y} \\
 R &= 1 - \frac{3}{2} P_z A_y + \frac{1}{2} P_{zz} A_{yy} & P_{zz} &= \frac{L + R - 2}{A_{yy}}
 \end{aligned}
 \rightarrow$$

- L,R,U,D - The normalized dp-elastic scattering events to the left (L), right (R), up (U), down (D);
- $A_y, A_{yy}, A_{xx}$  — analyzing power;
- $P_z, P_{zz}$  — components of polarization.
